

Security Service Offerings

Network Gateway Assessment

Do you know who's knocking on your network's door? Find out today.

We want you to see for yourself the magnitude of malicious activity that exists on the Internet, and how much of that activity makes it to your network's doorstep. In fact, as part of our continuing mission to end network intrusions, we think you **need** to know. That is what our Network Gateway Assessment is for.

Compliance Issues

The Sentinel plays an essential role in the ever-changing world of network security compliance. Here are a few examples of current laws, and how the Sentinel can help you comply:

Gramm-Leach-Bliley Act (GLBA)

Health Insurance Portability and Privacy Act (HIPAA)

Payment Card Industry Data Security Standard (PCI)

Sarbanes-Oxley Act (SOX)

Federal Information Security Management Act (FISMA)

For more information, visit <http://www.networkcloaking.com/compliance>

What you get.

Learn who is attacking your network with a free 14-day Network Gateway Assessment.

Learn how your network shows itself to the bad guys with a free certified ASV mapping scan.

Find infected machines hiding on your network with our EPS module.

How we do it.

First, we install a Sentinel IPS on your network, which takes less than 90 seconds. Then we run a certified ASV mapping scan on your network, for free. Finally, after seven to 14 days, we use the Sentinel's reporting features to review the data with you.

Who needs it?

The obvious answer is 'everyone'. There isn't a company out there that doesn't need to consider the dangers of malicious traffic on the Internet, and some are more prepared for the risks than others. If you've never seen the type of malicious activity aimed at your network, then you need this assessment.

If you **have** studied your network's traffic, then you know the threat is real. Our Sentinel IPS service can help you with that, too. Learn more at <http://www.networkcloaking.com>.

(We also offer additional security consulting, if necessary. Please contact us directly for pricing.)

Other Offerings from Sentinel IPS™

Intrusion Prevention Services. Sentinel IPS is a leading provider of intrusion prevention services. We provide a low-cost, low-maintenance solution that is easy to implement and even easier to maintain.

Extrusion Prevention Systems. Designed to supplement our Intrusion Prevention Systems (Sentinel IPS), the Sentinel EPS keeps an eye on your network's internal infrastructure. The Sentinel EPS records malicious traffic originating from your network, giving you the power to identify potentially compromised machines on your LAN.

Educational Opportunities. We offer several Internet security courses that are appropriate for everyone from CEOs to non-technical employees to Internet security experts. The courses also vary in length, from simple 1-hour presentations to full-week advanced intrusion prevention courses, and everywhere in between.
